

FOR IMMEDIATE RELEASE:

December 14th 2009 – IPSTA – ‘The International Public Safety Training Alliance’ announces the launch of the most comprehensive WEB based Security Checkpoint Training Suite in the world.

It’s easy to smuggle illegal items through the security checkpoint if the security personnel are not effectively trained.

LEARN from the same extensive training programs used internally by the FBI, State Department, Pentagon, District of Columbia Superior Courts, and United States Attorney’s Office and many others to ensure their protection personnel have the best possible knowledge, skills and abilities to stop illegal items from entering their secure environments.

You may have:

- Strategically placed, technically sophisticated security checkpoints.
- X-Ray machines; walk through metal detectors, hand wand metal detectors and explosive trace detection machines.
- The best, most vigilant security officers and personnel.

Are your facilities, personnel and assets safe, or just lucky?

All of your investment in technology and manpower is severely undermined without the knowledge to clearly identify and isolate threat items within equipment or on an intruder. The most effective way to gain this knowledge is through training and experience. Until now, knowledge was restricted to classroom or internal “computer based training”. Not any more! The International Public Safety Training Alliance’s unique LEARNING MANAGEMENT SYSTEM provides “timed” guidance through each learning module. Students must reach minimal knowledge retention milestones, prior to moving to the next module. Modules gradually become progressively more difficult, culminating with proficiency testing, automatic grading and certificate issuance from your computer, upon successful completion.

Our LMS security features minimize academic misconduct with built in, administrative off-site reporting, student access lockouts and test question (auto-randomizer). IPSTA has paved the way for today’s protection personnel to COLLECTIVELY identify REAL WORLD threats in virtual REAL TIME.

Our **Security Checkpoint Training suite is the ultimate** training solution to develop the skills and understanding to defeat terrorism and violent criminal activity.

Your days of being “lucky” just became obsolete!

The complete Security Checkpoint Training solution can be taken as 1 curriculum or as individual lessons:

- ***Security X-Ray Machine Introduction***
- ***Security X-Ray Image Interpretation***
- ***Walk Through Metal Detector***
- ***Hand Wand Metal Detector***
- ***Explosive Trace Detection***

Contact us today for further information regarding exactly what each program offers or simply register on our website and begin the programs today!
